About Me

I'm a fresh Mathematics graduate from Universitas Pendidikan Indonesia with strong interest in data analysis. I gained hands-on experience at Otoritas Jasa Keuangan, where I served 100+ debtors in credit history verification while adhering strictly to regulatory SOPs, and at Kementrian Keuangan, where I archived and managed 1000+ tax related files. These experiences sharpened my attention to detail and my ability to handle sensitive data with accuracy and compliance.

To pursue my interest in data analysis, I've been learning SQL for data cleaning and analysis, and Tableau for data visualization to make insights easier to communicate. My analytical foundation comes from my Mathematics background, including hypothesis testing and statistical analysis. I'm also familiar with Microsoft Office, Google Workspace, and Python to support data related tasks.

PROJECT

- Superstore sales & Analysis

Superstore sales & Analysis

Business Questions:

- 1 Which category/sub-category is most profitable vs. most loss-making?
- 2 Which region/state has high sales but low profit?
- 3 Does a higher discount lead to lower profit?
- 4 Is there a seasonal pattern in monthly/yearly sales?

Key insights:

- 1 **Category/Sub-Category:** Technology (Copiers) is the most profitable sub-category, while Furniture (Tables) consistently generates a loss overall.
- 2 **Region/State:** Ohio shows high sales but a negative profit margin (-21.7%), while West (California) leads in overall profit and Texas records the largest loss.
- 3 **Discount vs. Profit:** Profit declines as discount increases, discounts above 20% are consistently associated with net losses.
- 4 **Seasonal Trend:** Sales peak in Q1 (March) and Q4 (September–November), suggesting seasonal demand that could inform inventory and promotion planning.

	Year			
	2014	2015	2016	2017
Transactions	969	1038	1315	1687
Total Profit	49543	61618	81795	93439

All this data was processed using SQL to answer the business questions outlined in this analysis from identifying category performance to uncovering seasonal sales trends.

Dashboard Preview

Superstore Sales & Profit Analysis

Profit by Region & State

Profit by Sub-Category

Hovering over and clicking on a state in the Region & State map automatically updates all other visuals. Including the monthly trend, discount vs. profit, and sub-category profit charts to reflect the selected location. Diverging color coding is also applied throughout the dashboard to make profit and loss values easier to interpret at a glance.

More Analysis

Why does Tables lose money?

- High shipping cost for bulky items
- Possibly heavier discounting
- Naturally thin margins

Why does Ohio underperform despite high sales?

- Sales may be dominated by low margin categories
- Higher average discounts
- Regional operating costs

Why do high discounts hurt profit so much?

- Discounts applied to slow moving stock
- Given without regard to base margin

Why do sales spike in March and Q4?

- Back to school/ office cycles
- Year-end holiday shopping
- Corporate fiscal-year budget
